Please be fully informed about the dangers and expenses of trading assets on digital markets. Cryptocurrencies are highly speculative and carries high risk, not suitable for all investors, and not suited to pensioners. If you are a pensioner, do not trade BCM. You should carefully evaluate your investing goals, level of expertise, and risk appetite before opting to trade cryptocurrencies, tokens, or any other digital asset.

Citizens and residents from the United States, Mainland China, and other restricted jurisdictions such as those listed on www.bitcoinmetal.com are not permitted to participate in the trading of BCM or its services. BCM may restrict additional jurisdictions from time to time without prior notice.

ABSTRACT

This white paper is a reader-friendly explanation of a decentralized blockchain powered by Binance Smart Chain (BSC) Technology. The rise of digital currencies have allowed a new economy run parallel to the old traditional economies connected to centralized institutions.

Many investors retain their digital funds without making a profit (especially during a bear market). BCM is a cryptocurrency and marketplace powered by decentralized smart contracts, by utilizing blockchain technology.

BCM is different to other traditional cryptocurrencies because it aims to be hedged against bear markets with the e-token USDT as the baseline. As a hedged token, the objective is a daily increase above USDT irrespective of bear markets. The increase can only be gradual and not sporadic (no quick spikes) because there are costs associated with any hedged products.

The funds raised from BCM sales are used for market-making opportunities in the crypto universe, and only low risk opportunities are entertained.

Token: BEP-20

BscScan Contract

Supply: 10 Billion

Burn Token: Yes

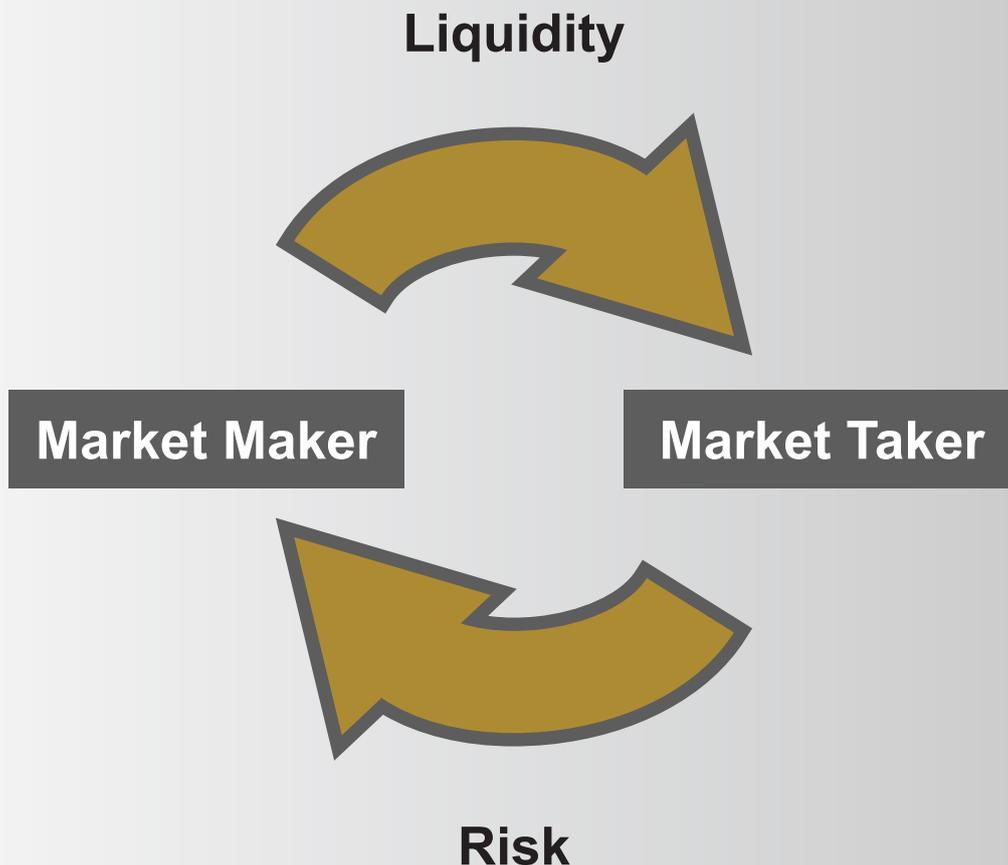

MARKET MAKERS

Low liquidity markets have wide bid/ask spreads in their order books, which increases asset volatility - so traders have a harder time getting a decent deal and achieving order sales/purchases. Market liquidity impacts market growth, while market makers ensure market liquidity. Liquidity is the ease with which buyers and sellers can exchange an asset at any time.

BCM, as a market making instrument, has a very simple but focussed strategy. Funds raised from BCM are used in market making opportunities, with a low risk tolerance, and the profits generated in turn increase the value of BCM.

The benefits of Market Making in crypto are:

- Enhances market liquidity and order book depth.
- Price volatility is reduced.
- It aids in the discovery of a reasonable price.
- Bid/ask spreads in bitcoin exchange order books are becoming more efficient.
- Traders will benefit from more ordered entry and exit points.
- Slippage is much reduced.
- Larger institutional investors can be attracted.
- Reduce the impact of large price swings.

BENEFITS OF BCM

Audit

When BCM is exchanged on the BSC blockchain using the BCM platform, an audit trail is created to track where the tokens originated. As each new transaction is encrypted and connected to the initial transaction, BCM is considerably more secure than conventional record-keeping methods. This can assist with security and fraud prevention in exchange-related enterprises and with verifying the validity of exchanged assets.

Lower Fees

BCM transactions have significantly lower costs than debit and credit card transactions, wire transfers, BACS payments, and other cryptocurrency chains.

The objective of BCM is strong risk management to enable a daily increase in the value of the token relative to USDT. Many hedging tokens have been offered in the crypto universe, few have offered a hedge against USDT.

Risk Relmagedined

The objective of BCM is strong risk manement to enable a daily increase in the value of the token relative to USDT. Many hedging tokens have been offered in the crypro univere,few have offered a hedge against USDT.

Expect Opportunity

BCM was created by entrepreneurs for entrepreneurs, so expect lots of opportunity (but with tight risk management)!
